Also, it is relatively easy to handle in performing reliability analysis. The probability density function of the distribution is defined by $f(t) = \lambda e^{-\lambda t}$ for $t \geq 0$, $\lambda > 0$ (2.35) where $f(t)$ is the probability density function, t is time. λ is the distribution parameter. In reliability studies, it is known as the constant failure rate.

From 1980 until the mid-1990s, the goal of DoD reliability policies was to achieve high initial reliability by focusing on reliability fundamentals during design and manufacturing. Subsequently, DoD allowed contractors to rely primarily on "testing reliability in" toward the end of development.

Reliability Prediction has many roles in the reliability engineering process. The impact of proposed design changes on reliability is determined by comparing the reliability predictions of the existing and proposed designs. The ability of the design to maintain an acceptable reliability level under environmental
