In linear algebra, a nilpotent matrix is a square matrix N such that $N^k = 0$ for some positive integer k . The smallest such k is sometimes called the index of N . More generally, a nilpotent transformation is a linear transformation L of a vector space such that $L^k = 0$ for some positive integer k (and thus, $L^j = 0$ for all $j \geq k$). Both of these concepts are special cases of a more general concept ...

Nilpotent matrix - Wikipedia

Algebra on geometrian ja analyysin ohella yksi matematiikan perusteista. Algebrassa tutkimuskohteina ovat laskutoimitusten yleiset ominaisuudet jossakin perusjoukossa, jossa ne on määritelty. Tällaisia laskutoimituksia voivat olla esimerkiksi yhteen- ja kertolasku. Laskutoimitusten määrittely joukkoon tuottaa algebran perusrakenteet: ryhmän, renkaan ja kunnan.

Algebra - Wikipedia

In the mathematical discipline of linear algebra, a triangular matrix is a special kind of square matrix. A square matrix is called lower triangular if all the entries above the main diagonal are zero. Similarly, a square matrix is called upper triangular if all the entries below the main diagonal are zero. A triangular matrix is one that is either lower triangular or upper triangular.

Group theory - Wikipedia

In de groepentheorie, een deelgebied van de wiskunde, is een groep een bepaalde algebraïsche structuur. Een groep bestaat uit een verzameling en een operatie (groepsbewerking), die altijd op twee elementen van werkt, dus een binaire operatie. Groepen voldoen aan een aantal voorwaarden of axioma's. Er zijn vier groepsaxioma's: de operatie is gesloten, de operatie is associatief, er is in de ...

Groep (wiskunde) - Wikipedia

(G, \cdot) is a group if and only if:
1. \cdot is associative: $(a \cdot b) \cdot c = a \cdot (b \cdot c)$ for all $a, b, c \in G$.
2. There is an identity element e such that $e \cdot a = a \cdot e = a$ for all $a \in G$.
3. For every $a \in G$, there is an inverse element a^{-1} such that $a \cdot a^{-1} = a^{-1} \cdot a = e$.
...
 $(a \cdot b)^{-1} = b^{-1} \cdot a^{-1}$ for all $a, b \in G$.
...
 $(a \cdot b)^{-1} = b^{-1} \cdot a^{-1}$ for all $a, b \in G$.
