Semiconductor "II. " Silicon is the most common material used to build semiconductor devices. " Si is the main ingredient of sand and it is estimated that a cubic mile of seawater contains 15,000 tons of Si. " Si is spun and grown into a crystalline structure and cut into wafers to make electronic devices.

There is therefore a persistent need for engineers who are well-versed in the principles of communication systems. These principles apply to communication between points in space, as well as communication between points in time (i.e., storage). Digital systems are fast replacing analog systems in both domains.
