The programming model and register set are fairly conventional, ultimately based on the register structure of the Datapoint 2200 (which the related 8086 family also inherited). The Z80 was designed as an extension of the 8080, created by the same engineers, which in turn was an extension of the 8008. The 8008 was basically a PMOS implementation of the TTL-based CPU of the Datapoint 2200.
