Curriculum Vitae - Harvard University Department of Physics

In this comment we address the preprint of Jha and Hirata (arXiv:1809.10316 [physics.chem-ph]) which claims "Numerical Evidence Falsifying Finite-Temperature Many-Body Perturbation Theory." We agree that finite difference differentiation of the exact grand potential is the correct way to verify the terms in the perturbation expansion.

LHCb delivered and recorded luminosity in 2018, the last year of Run 2. The corresponding numbers for 2015 are 371/pb and 328/pb; for 2016 1906/pb and 1665/pb, for 2017 1987/pb and 1817/pb.. The luminosity used in physics analysis of Run 1 data taken in 2011 and 2012 is 3/fb.. click the image to see the operational plot

The Breakthrough Prize in Fundamental Physics is awarded by the Fundamental Physics Prize Foundation, a not-for-profit organization dedicated to awarding physicists involved in fundamental research. The foundation was founded in July 2012 by Russian physicist and internet entrepreneur Yuri Milner.. As of September 2018, this prize is the most lucrative academic prize in the world and is more ...

Edward Witten (born August 26, 1951) is an American theoretical physicist and professor of mathematical physics at the Institute for Advanced Study in Princeton, New Jersey.. Witten is a researcher in string theory, quantum gravity, supersymmetric quantum field theories, and other areas of mathematical physics.. In addition to his contributions to physics, Witten's work has significantly ...

1. Fine-Tuning for Life: the Evidence 1.1 Examples from Physics. Our best current theories of fundamental physics are the Standard Model of elementary particle physics and the theory of general relativity.

Fine-Tuning (Stanford Encyclopedia of Philosophy)

Supersymmetry (SUSY) is a theoretical framework in particle physics that postulates the existence of superpartners for each known particle. It is a candidate for a theory of quantum gravity and is motivated by the need to solve the hierarchy problem and to provide a dark matter candidate. The theory is based on the idea of supersymmetry, which relates bosons and fermions. The theory is still speculative and has not been experimentally verified.

La plus puissante installation du CERN est le Large Hadron Collider (LHC), qui a été mis en service le 10 septembre 2008 (initialement prévu en novembre 2007). Le LHC se trouve tout au bout de la chaîne d'accélérateurs. Dans le cas d'une accélération de protons, ceux-ci empruntent le chemin suivant : . Tout commence par une source de protons appelée « duoplasmatron ».

String theory is a theoretical framework in which the particles of nature are one-dimensional objects rather than zero-dimensional points. It is a candidate for a theory of quantum gravity and is motivated by the need to solve the hierarchy problem and to provide a dark matter candidate. The theory is based on the idea of strings, which are one-dimensional objects. The theory is still speculative and has not been experimentally verified.

Scientists suggest spacetime has no time dimension - Phys.org

Summary In this talk I begin noticing that while ignoring the crucial role of temporal coherence, the formulation of most of nowadays current computer vision recognition tasks leads to tackle a problem that is remarkably more difficult than the one nature has prepared for humans.

La démographie sera assurément un des enjeux majeurs de notre siècle. Alors qu'un milliard d'êtres humains souffrent d'absence de malnutrition, la population mondiale ne cesse de croître, pour atteindre sept milliards à la fin octobre, et plus de neuf milliards d'ici 2050.

Comment nourrir 9 milliards d'humains sans détruire la

As a follow-up to Tuesday's post about the majority-minority public schools in Oslo, the following brief account reports the latest statistics on the cultural enrichment of schools in Austria. Vienna is the most fully enriched location, and seems to be in roughly the same situation as Oslo. Many thanks to Hermes for the
