Polarographic Methods In Analytical Chemistry

POLAROGRAPHIC METHODS OF ANALYSIS. The measurement of the stripping time was graphical and analogous to that used in polarography. The steep part of the curve, more or less parallel to the time axis in the middle of the curve, was taken as the stripping time.

The chemicals used for preparation of the buffer solutions are analytical grade. A polarographic analyzer PAR 174A (EG & G Princeton Applied Research, Princeton, USA) was used with matched drop timer (PAR 174/7o) and x-y recorder (Omnigraphic model 2200-4-3; Houston Instrument, Austin, USA).

Polarographic determination of extraction constants

Polarography is a specific type of measurement that falls into the general category of linear-sweep

voltammetry where the electrode potential is altered in a linear fashion from the initial potential to the final potential. As a linear sweep method controlled by convection/diffusion mass transport, the current vs.

Results and discussion. A further polarographic study was made to try to decide whether the compound responsible for the analytical peak used here was a diketopiperazine compound. Polarographic studies were made of cefaclor solutions in Bâ€R buffer pH 10 using acetic anhydride as a protecting group for the amine moiety.
