The main objective of this review is to highlight the recent advances which affects the performance of plate heat exchangers specially in the industrial section. As an industrial application, Karlsson [8] evaluated the performance of plate heat exchangers in residential water radiator heating systems receiving their heat from geothermal resources.

This paper presents the state-of-the-art and recent advances on the design of integrated heat exchanger-absorbers. A variety of geometries of HEX-absorber have been surveyed and categorized, including horizontal tubes, vertical tubes, plate type and others.

Recent progresses in heat pump systems have centred upon advanced cycle designs for both heat- and work-actuated systems, improved cycle components (including choice of working fluid), and exploiting

utilisation in a wider range of applications.
