Recent advances in understanding and managing non-alcoholic fatty liver disease [version 1; referees: 2 approved] ... Non-alcoholic fatty liver disease is a leading cause of chronic liver disease that can lead to cirrhosis, hepatocellular cancer, and end-stage liver disease, and it is linked to elevated cardiovascular- and cancer-related ...

In this paper a new non-destructive testing (NDT) system is presented. The innovative system is composed by a new type of eddy currents probe, electronic devices for signal generation, conditioning and conversion, automated mechanized scanning and analysis software.

In this review, the latest technologies and devices for noninvasive glucose monitoring have been described. Unfortunately, none of these technologies have produced a commercially available, clinically reliable device; therefore, much work remains to be done.

Deep networks, Bayesian inference, matrix and tensor factorization and dynamical systems are some representative examples where non-convex methods constitute efficient -- and, in many cases, even more accurate -- alternatives to convex ones.
