Name Daily Common Core Review 11-6

Because both red hair and freckles are usually caused by the same gene, MC1R. The gene perches on melanocytes and controls the pigment balance in both hair and skin.

Why Do Some People Have Freckles? | Mental Floss

Red hair (or ginger hair) occurs naturally in 1–2% of the human population. It occurs more frequently (2–6%) in people of northern or western European ancestry, and less frequently in other populations. Red hair appears most commonly in people with two copies of a recessive allele on chromosome 16 which produces an altered version of the MC1R protein.
