Self-Organization in Electrochemical Systems I - General

The nanoscale self-organization of biomolecules, such as proteins and peptides, on solid surfaces under controlled conditions is an important issue in establishing functional bio/solid soft interfaces for bioassays, biosensors, and biofuel cells.

Marek Orlik: Self-organization in electrochemical systems

It is interesting to consider the mechanism for electrochemical self-organization of such long, smooth silver wires, bearing in mind, that the growth rate of the wires is of the order of 10^{-4} m/s in our experiments and that the entropy of interfacial phase transition for silver is small.
