Strength of materials, also called mechanics of materials, is a subject which deals with the behavior of solid objects subject to stresses and strains. The complete theory began with the consideration of the behavior of one and two dimensional members of structures, whose states of stress can be approximated as two dimensional, and was then generalized to three dimensions to develop a more ...

The yield point is the point on a stress-strain curve that indicates the limit of elastic behavior and the beginning of plastic behavior. Yield strength or yield stress is the material property defined as the stress at which a material begins to deform plastically whereas yield point is the point where nonlinear (elastic + plastic) deformation begins. . Prior to the yield point the material ...

1,10-phenanthroline-Cu is an active CO<sub>2</sub> reduction catalyst on a mesostructured graphene electrode in aqueous solution. The Cu(I) site is reversibly heterogenized near graphene surfaces with potential control to commence catalysis. The mesostructure of graphene suppresses hydrogen evolution by limiting mass transport from electrolyte to electrode, while CO<sub>2</sub> reduction is not sensitive to ...
